Figure B. Frozen LSTM contract

Frozen synthetic-benchmark model; intended live checkpoint is separate and unavailable.

Per-feature reconstruction-error comparisons accompany the global MSE decision.
The 16-dimensional hidden state is not a validated causal representation.
No live-training checkpoint or live-inference result is represented here.

Source: models/lstm_autoencoder.json; Phase 3 implementation audit.

Boundary: Frozen synthetic-benchmark contract only; it does not establish live inference performance.
